DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-6, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Kyo et al (WO 96/10439).

Kyo teaches all the claimed subject matter. See page 4, paragraph 1 of the translation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 7, and 11-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kyo et al.

Kyo teaches all the claimed subject matter except for the exact depth of the molded well section. Absent a teaching of criticality by applicant, one of ordinary skill in

the art would find it obvious to determine the size of the well according to the amount of drug being introduced.

Connectors for electrical leads of a wide variety are well-known in the art and obvious one of ordinary skill to facilitate connections between equipment and the instrument.

The method of making claimed in claims 11 and 12 essentially recites the assembly of the components, which is obvious from the completed structure.
